GPA Current Island-Wide Power System Status and Other Power Related Updates

(Fadian, Mangilao) – As of 6:00 a.m. today, the following is Guam Power Authority's current status of the Island-Wide Power System (IWPS) and other Power Related Updates:

- On Wednesday, April 15, 2026 crews successfully linked north and south back into a single grid. This includes the Naval Station and Apra Heights substation, which serves the Hågat and Sânta Rita-Sumai communities.
- Today's priority includes connecting Apra Heights to Talo'fo'fo to Pulantat, Yona and Barrigada Substations. This key step would complete the island-wide transmission loop.
- GPA crews have successfully restored 15 of 63 distribution circuits/feeders, including critical service areas such as Guam Memorial Hospital (GMH), Tumon Hotel Row, Harmon Industrial Park, and the Antonio B. Won Pat International Airport, Guam.
- The primary mission today is to complete the transmission loop and continue restoring distribution feeders throughout the island. Crews are working a minimum of 12-hours day and evening shifts to ensure continuous 24/7 restoration operations.
- Generation capacity remains stable, with the Ukudu GTG #1 and Dededo CT units 1 and 2 power plants meeting current load demand. Remaining baseload units at Ukudu and Piti Units 8 and 9, along with GPA's reserve units are ready.
- The system demand this morning is 35 MW, approximately 20% of the normal morning load, and is expected to increase substantially as restoration work progresses today.
- GPA will focus on restoring all feeders. During this stage of recovery, some energized feeders may still leave pockets of isolated customers with extensive damages. GPA will return to restore service to those remaining customers immediately after all other feeders without faults are restored.
- Our priority is to restore energy back into your homes and businesses, and restore the IWPS online at full capacity. GPA line workers and support crews are working night and day for you, your family, and your businesses.
- GPA confirms adequate personnel, equipment, and materials to including poles, wires, and transformers are available to fully restore service to all customers.

- GPA is aware of all customer outages throughout the island. Guam Power Authority's Automated Meter Infrastructure, or Smart Meter Network, and Supervisory Control and Data Acquisition (SCADA) systems will provide detailed information on outage locations. These systems allow GPA to confirm where power has been restored, identify customers still without service, and locate smaller outage pockets within villages.
- We ask our customers to limit calls to our GPA Dispatch Center (PSCC) to critical issues such as down lines on the ground, blown transformers and low voltages being experienced at homes or businesses and other more serious and significant issues.
- Please refer to our previous Advisory which discusses voltage fluctuations during restoration. As power is restored, some customers may experience temporary voltage fluctuations such as flickering lights, dimming, or partial power. Customers are advised to shut off their main breaker and report the issue to GPA for response.
- Please stay away from all down lines and equipment as they may still be energized and can cause harm if you come in contact with the lines or equipment. Consider such situations as dangerous and life threatening. If such conditions are present, please immediately report this situation to GPA's 24-Hour Trouble Dispatch at (671) 475-1472/3/4 or via direct message on GPA's Facebook or Instagram page. Customers may also email customersfirst@gpagwa.com. Please provide the exact location or address, contact information and condition of location when submitting your report.
- For proper use of generator, GPA asks that you ensure your main breakers are opened (off position) when operating your private generator. This is for the safety of the crews and your equipment.

GPA will continue providing daily recovery updates at approximately 2:00 p.m.

We thank you for your patience and ask for your continued support and cooperation as we work to bring our IWPS back to normal operations as quickly as possible.

And finally, KUDOS to the men and women of GPA for their hard work and unwavering dedication to restore the IWPS. Despite lingering rain and strong, gusty winds, crews mobilized Wednesday with the primary mission of restoring transmission lines and substations from north to south and link the two previously unstable separated systems back into a single grid. Field supervisors carefully assessed conditions to ensure work was carried out safely, and crews successfully advanced restoration efforts under hazardous conditions. We ask the community to keep our crews and their families in their thoughts and prayers.
