Power System Status Restoration

Day 2 Since COR4 – ST Sinlaku

(Fadian, Mangilao) – The Guam Power Authority (GPA) continues its power restoration process and have made progress to its post-typhoon recovery. In an effort to keep the public updated, we'll continue to provide a recovery summary that summarizes our restoration progress to the Island-Wide Power System (IWPS).

Impacts from ST Sinlaku - Recovery Summary

As of 9:00 a.m., Saturday, April 18, 2026

IWPS	PERCENTAGES
System Load Restored	66%
GPA Substation Energized	96%
GPA Feeders/Circuits Energized	70%

GENERATION CAPACITY	MW
Current Peak Demand (Targeted Demand: 234 MW)	141

- Notes:**
- No Feeders/circuits can be energized unless GPA Substation is energized.
 - System Load percentage increases as GPA feeders/circuits percentage increases.
 - GPA has adequate generation capacity to support peak demand.

Feeders/Circuits: A total of 44 feeders/circuits are energized today of the 63 distribution feeders/circuits.

Substations: A total of 28 critical substations energized of the 29 total major GPA substations.

TODAY'S KEY OBJECTIVES INCLUDE:

- Almost all substations throughout the island, including down south, are now energized.
- Crews are now concentrating on restoring distribution feeders/circuits.
- During this stage of recovery, some energized feeders may still leave pockets of isolated customers with extensive damages. GPA will return to restore service to those remaining customers immediately after all other feeders without faults are restored.
- Repair and restore isolated pockets, including transformer replacements, service lines, meters, and other necessary components.
- Continue working on urgent needs across the island.

FOR CUSTOMERS WHO REMAIN WITHOUT POWER:

- Customers may be on feeders that have not yet been energized
- In some areas, power may be restored to main lines while additional repairs are still needed on transformers, service lines, or customer connections
- Customers may also be experiencing isolated damage that requires crews to return after main circuits are restored
- If surrounding areas have power, customers may be part of a smaller outage pocket
- Customers are asked to limit calls to the GPA Dispatch Center (PSCC) to critical issues such as downed power lines, blown transformers, low voltage conditions, or other situations that may present a safety concern

GENERAL NOTIFICATIONS:

- For proper use of generator, GPA asks that you ensure your main breakers are opened (off position) when operating your private generator. This is for the safety of the crews and your equipment
- Voltage fluctuations during restoration. As power is restored, some customers may experience temporary voltage fluctuations such as flickering lights, dimming, or partial power. Customers are advised to shut off their main breaker and report the issue to GPA
- Please stay away from all down lines and equipment as they may still be energized and can cause harm if you come in contact with the lines or equipment. Consider such situations as dangerous and life threatening. To report downed power lines, contact GPA Trouble Dispatch at (671) 475-1472 / 1473 / 1474. Customers may also email customersfirst@gpagwa.com or send a direct message on GPA's Facebook or Instagram page. Please provide the exact location or address, contact information and condition of location when submitting your report.
- GPA understands that residents are eager to have service fully restored and thanks the community for the outpouring of support shown to crews working in villages across the island. Residents are asked to allow crews to work unimpeded. While crews understand the urgency and concerns, stopping them to ask about restoration timelines delays progress and creates safety risks. Allowing crews to continue their work and focus on their tasks at hand while concentrating on repairs will help ensure power is restored as quickly and safely as possible.
- GPA will continue providing updates as restoration efforts progress.

GPA thanks our customers for their patience and asks for their continued support as we work to bring our IWPS back to normal operations as quickly as possible.
