Power System Status Restoration and Power Related Updates

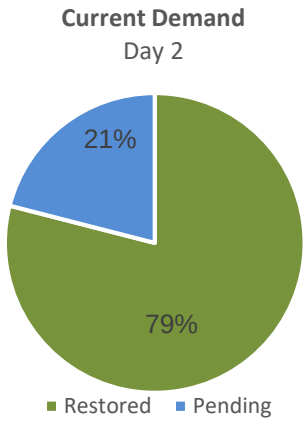

Day 2 since COR 4 – Typhoon Champi

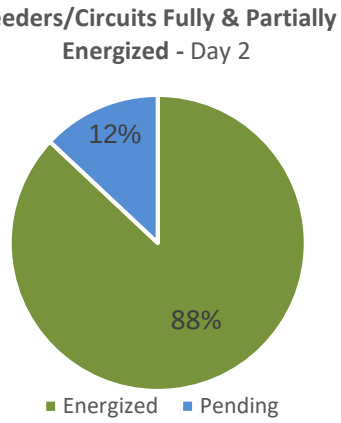

(Fadian, Mangilao) – The Guam Power Authority (GPA) continues its power restoration process and continues to make significant progress to its post-typhoon recovery. In an effort to keep the public updated, we'll continue to provide a recovery summary that summarizes our restoration progress to the Island-Wide Power System (IWPS).

Typhoon Champi - Recovery Summary
As of 7:00 a.m., Tuesday, Oct. 20 2026

IWPS

Transmission Lines (50 each)	98%
Substations Energized	100%
Feeders/Circuits Energized *(Fully & Partially)*	88%
Current Demand (137MW) *(Target Demand 174MW)*	79%

Feeders/Circuits: A total of 59 feeders/circuits are energized or partially energized of the 67 distribution feeders/circuits.
Substations: All 30 critical substations are energized. All critical transmission lines restored.
Generation Capacity: Adequate. (GPA does not anticipate any generation capacity shortage. All Ukudu generators including the steam turbine generator are online.)
Inventory Status: Adequate. (GPA has adequate inventory to ensure that critical materials and supplies are readily available when needed.)

TODAY'S KEY OBJECTIVES AND OTHER POWER RELATED UPDATES:

- Line crews to concentrate restoration work on remaining distribution feeders/circuits that are still without power.
- During this stage of recovery, some energized feeders may still leave pockets of isolated customers with extensive damages. GPA will return to restore service to those remaining customers immediately after all other feeders without faults are restored.
- In this phase of post-typhoon recovery, GPA crews are addressing all sectors: north, central and south to restore as many customers as possible.
- Feeders to be addressed today include:
  - Hågat, Sånta Rita-Sumai to include Cross Island Rd. (P-220, P-222, P-223, P-260)
  - Malesso' (P-340)
  - Piti (P-007)
  - Sinajana (P-252)
  - Dededo along Route 16, Harmon towards GIAA to include Alageta St. (P-310)
- Generation personnel continue to address generators for water wells and waste water service.
- Continue working on urgent critical infrastructure and energize school facilities across the island.

Please stay away from all down lines and equipment as they may still be energized and can cause harm if you come in contact with the lines or equipment. Consider such situations as dangerous and life threatening. **To report downed power lines or for emergency power issues**, call GPA Trouble Dispatch at (671) 475-1472/73/74.

Customers may report **non-emergency power issues** - such as damaged weather heads, internal electrical damage requiring Emergency Work Clearances, or inquiries about service restoration - to GPA's Customer Call Center at (671) 647-5787/88/89, email at customersfirst@gpagwa.com or sending a direct message to GPA's Facebook page. The Customer Call Center will continue to operate 24/7 throughout the post-typhoon recovery period.

GPA understands that residents are eager to have service fully restored and thanks the community for the outpouring of support shown to crews working in villages across the island. **Residents are asked to allow crews to work unimpeded. While crews understand the urgency and concerns, stopping them to ask about restoration timelines delays progress and creates safety risks**. Allowing crews to continue their work and focus on their tasks at hand while concentrating on repairs will help ensure power is restored as quickly and safely as possible.

GPA will continue providing daily updates as restoration efforts progress. GPA thanks our customers for their patience and asks for their continued support as we work to bring our IWPS back to normal operations as quickly as possible.
