## **ADVISORY TO THE PUBLIC**

### **Voltage Fluctuations During Power Restoration**

(Fadian, Mangilao) – Guam Power Authority (GPA) advises customers that as power is restored, some customers may experience temporary voltage fluctuations such as flickering lights, dimming, or partial power. These conditions can occur while crews stabilize the system.

If you experience power fluctuations:

- Turn off your main breaker to protect your home
- Unplug sensitive electronics and appliances
- Wait until power stabilizes before restoring power
- Use surge protectors where possible

Do not operate appliances during unstable power conditions, as this may cause damage.

If unsafe or unusual conditions continue after restoration, please contact GPA Trouble Dispatch at (671) 475-1472/73/74 or via direct message on GPA's Facebook or Instagram page. Please provide the exact location or address and contact information.

GPA crews continue working to stabilize the system and safely restore power across affected areas. GPA thanks the public for their patience and asks for your understanding, as we work on restoring power to the island and bring the system back to a normal state.
