Power System Status Restoration and Power Related Updates Day 5 since COR 4 – ST Bavi

(Fadian, Mangilao) – The Guam Power Authority (GPA) continues its power restoration process and have made some progress to its post-typhoon recovery. In an effort to keep the public updated, we'll continue to provide a recovery summary that summarizes our restoration progress to the Island-Wide Power System (IWPS).

ST Bavi - Recovery Summary

As of 10:00 a.m., Sunday, July 12, 2026

IWPS

System Load Restored (Customer Demand)	80%
Feeder/Circuits Energized (Fully & Partially)	93%
Substations Energized	100%
Transmission Lines	100%

System Load Restored
Day 5

Feeder/Circuits Fully & Partially
Energized - Day 5

Generation Capacity: Total generation system capacity for today is 268 MW which is adequate for the current load of 165 MW.

Feeder/Circuits: A total of 62 of the 67 distribution feeders/circuits are either fully or **partially energized** as of today.

TODAY'S KEY OBJECTIVES AND OTHER POWER RELATED UPDATES:

- Line crews are continuing restoration work on distribution lines in villages with minimal damage.
- Generation personnel continue to address generators for **water wells and wastewater service** and transition these critical infrastructures to island power.
- As power lines heat up, weak points of the system will be apparent (e.g., *storm damaged transformers, fuse cutouts, lightning arrestors, connections*). Additionally, hardware components may have been loosened from the passing of the storm which may fail after power had been restored. Crews will do their best to make immediate repairs; if they cannot, they will return to make the repairs as soon as possible.
- Continue working on urgent critical infrastructure and facilities across the island.

POST-TYPHOON RECOVERY PHASE II / III

- In **Phase II** of the post-typhoon recovery, GPA crews are addressing all sectors (north, central and south) to restore as many customers (with minimal damages) as possible per feeder. During this stage of recovery, some energized feeders may still leave pockets of isolated customers with extensive damages.

- In **Phase III** of the post-typhoon recovery, crews will return to complete repairs on isolated areas with extensive damages on overhead issues (defective transformers, debris on power lines such as bamboo trees, and other hardware component replacements) after all feeder distribution lines with minimal damages are restored.

Areas of focus over the next 1 to 3 days include portions of the following:

*(This schedule is subject to change and feeders/circuits may only be **partially energized** due to severity of damages in the areas which repairs will be addressed in Phase III Post-Typhoon Recovery process.)*

NORTH:

- **P-046, Dededo:** Along Route 3 from Route 1 intersection to Potts Junction including Swamp Rd., Machananao, Chalan Kareta and nearby areas; Ysengsong to Fire Station, parts of Astumbo Gardens, and surrounding areas. **Ongoing work in progress on P-046*
- **P-088, Dededo:** Lucky Supplies, Route 1 southbound from Prestige Motors to Fatima Rd., including parts of Dededo village, Kaiser area, Summerville Estates, Ysengsong Rd., Clara St., GHURA AMP 4, W. Santa Barbara, including Mobil, GTA, Calvo's Center, GPD Dededo Precinct and surrounding areas. **Ongoing work in progress on P-088*
- **P-245, Tamuning:** Harmon Industrial Park, Boy Scouts, and surrounding areas.
- **P-271, Dededo:** A portion of Harmon Loop Rd and surrounding areas.
P-271, Tamuning: Route 1 northbound towards Dos Amantes Plaza, Sgambelluri St., Adrian Sanchez St./Hamburger Road and surrounding areas.
**Ongoing work in progress on P-271*
- **P-330, Yigo:** Along Route 1 from Mataguac intersection towards Chalan La Chanch entrance, Chalan Kaskahu, a portion of Mataguac along Route 9 (Machananao, Agafa Gumas) to Potts Junction; to include Route 1 southbound (Paradise Meadows, Chalan Koda) and surrounding areas.
**Ongoing work in progress on P-330*

CENTRAL:

- **P-250, Hagåtña:** Hagåtña swamp to Route 4 toward Afame Rd. and surrounding areas.
P-250, Chalan Pago-Ordot: Along Route 4 from Spring Ln. to Route 10 intersection, including Dero Rd., Maimai St., and surrounding areas.
P-250, Sinajana: Sinajana Mobil, Holiday Towers, Afame Rd., Chaot, and surrounding areas.
P-250, Mangilao: From Mangilao on to Dairy Road toward Route 10 including DOC, portion of DYA and surrounding areas.
**Ongoing work in progress on P-250*
- **P-251, Hagåtña:** East O'Brien Dr, Route 1 and Route 8 intersection, including Bank of Guam, Reflection Center, Ada's Commercial Center, Big Hook, and surrounding areas.
P-251, MTM: Route 8 from Sgt. Roy T. Damian St. exit to ET Calvo Way, JA Camacho St. from East O'Brien Dr to Biang St., MongMong Catholic Church, CHamorro Gardens, and surrounding areas.
**Ongoing work in progress on P-251*
- **P-253, MTM:** Sgt. Roy T. Damian St., Biang St., west to Toto-Cañada Rd., Route 8 from Shop for Less to Maite Mobil; including West Cesario St., Chalan Machaute, and surrounding areas.
**Ongoing work in progress on P-253*

SOUTH:

- **P-220, Santa Rita-Sumai:** Route 17 (Cross Island Rd.) up to Bishop Flores St. and surrounding areas.
**Ongoing work in progress on P-220*
- **P-221, Santa Rita-Sumai:** Santa Rita village through Pale Ferdinand Way up towards Chalan Obispo Olano to RR Cruz St. and surrounding areas. **Ongoing work in progress on P-221*

- **P-223, S  ta Rita-Sumai:** Route 2A from Taco Bell to Route 2, including Route 5, Sumai Payless, and surrounding areas.
P-223, H  gat: Route 2 from Route 2A intersection to Nimitz Beach, including Inn on the Bay, portion of Route 12, Pagachao Dr., H  gat village, Umang Rd., and surrounding areas.
**Ongoing work in progress on P-223*
- **P-261/Talo'fo'fo:** Talo'fo'fo village, Route 4A towards Talo'fo'fo Bay including Wolford Heights and surrounding areas.
- **P-261, Inal  han:** Malojloj area, Poultry Farm, Dandan Rd., Inal  han Mayors Office, Inal  han Pool, Inal  han village Lada Lane, Inedo Lane, Bear Rock, Jesus M Crisostomo St., Inal  han Way, Ija Subdivision, Belen Avenue, Chagamin Lagu' and surrounding areas.
**Ongoing work in progress on P-261*
- **P-262, Yona:** Windward Hills, Baza Gardens towards Route 4, and surrounding areas.
P-262, Talo'fo'fo: Route 4A southbound to include Onward Golf Course (East side to include golf courses 10-18) towards Route 17 (Cross Island Rd.) intersection, Ipan, Chalan Kanton Tasi towards Tun Mariano Rd. to include Jeff's Pirates Cove, Perez Heights, Cruz Heights, and surrounding areas.
**Ongoing work in progress on P-262*
- **P-340, Hum  tak:** Route 2 Hum  tak village, Chalan Kanton Tasi including San Dionisio St., JS Quinata St., and surrounding areas.
P-340, Malesso': Route 4 Chalan Kanton Tasi, Malesso village including Malesso Pier, Merizo Elementary School, Quinene Rd., Arriola's Beach, Malesso' Canoe, and surrounding areas.
P-340, Inal  han: Route 4 Chalan Kanton Tasi, including Inedo St, Inarajan Garden House, Tongan Area, Agricultural Experimental Station Road, and surrounding areas.
**Ongoing work in progress on P-340*

GENERATION CAPACITY:

- **GPA does not anticipate any generation capacity shortage**, and plans to restore power service using the remaining base load and reserve units.
- Total *generation system capacity for today is 268 MW* which is adequate for the *current load of 165 MW*.
- **Baseload units currently online and providing energy to the grid:**
 - o Piti Units 8 & 9
 - o Ukudu Power Plant GTG 2 and GTG 3
- **Additional generating units supporting the grid:**
 - o Combustion Turbines (CT) and Diesel Generating Units

PATH FORWARD

- In **Phase II** of the post-typhoon recovery, GPA crews are addressing all sectors (north, central and south) to restore as many customers (with minimal damages) as possible per feeder. During this stage of recovery, some energized feeders may still leave pockets of isolated customers with extensive damages.
- In **Phase III** of the post-typhoon recovery, crews will return to complete repairs on isolated areas with extensive damages on overhead issues (defective transformers, debris on power lines such as bamboo trees, and other hardware component replacements) after all feeder distribution lines with minimal damages are restored.
- Continue to address critical infrastructure/facilities and generators for water wells and wastewater service to transition to island power.

FOR CUSTOMERS WHO REMAIN WITHOUT POWER:

- Customers may be on feeders that have not yet been energized.
- In some areas, power may be restored to main lines while additional repairs are still needed on transformers, service lines, or customer connections.
- Customers may also be experiencing isolated damage that requires crews to return after main circuits are restored.
- If surrounding areas have power, customers may be part of a smaller outage pocket.

- GPA is aware of all customer outages through its Advanced Metering Infrastructure, or Smart Meter Network, and Supervisory Control and Data Acquisition (SCADA) systems. These systems allow GPA to confirm where power has been restored, identify customers still without service, and locate smaller outage pockets within villages.
- Customers are asked to limit calls to the GPA Dispatch Center (PSCC) to critical issues such as downed power lines, blown transformers, low voltage conditions, or other situations that may present a safety concern.

GENERAL NOTIFICATIONS:

- Voltage fluctuations during restoration: As power is restored, some customers may experience temporary voltage fluctuations such as flickering lights, dimming, or partial power. Customers are advised to shut off their main breaker and report the issue to GPA.
- Damaged Weatherheads and other Electrical Components: Customers are advised to conduct their own home and property assessment, including the weatherhead, meter socket and other electrical components. If electrical equipment such as the weatherhead or meter socket was damaged during the storm, it must be repaired before power service can be restored. For more information, please contact GPA Customer Service at (671) 647-5787/88/89.
- Please stay away from all down lines and equipment as they may still be energized and can cause harm if you come in contact with the lines or equipment. Consider such situations as dangerous and life threatening. To report downed power lines, contact GPA Trouble Dispatch at (671) 475-1472 / 1473 /1474. Customers may also email customersfirst@gpagwa.com or send a direct message on GPA's Facebook or Instagram page. Please provide the exact location or address, contact information and condition of location when submitting your report.

GPA understands that residents are eager to have service fully restored and thanks the community for the outpouring of support shown to crews working in villages across the island. **Residents are asked to allow crews to work unimpeded. While crews understand the urgency and concerns, stopping them to ask about restoration timelines delays progress and creates safety risks.** Allowing crews to continue their work and focus on their tasks at hand while concentrating on repairs will help ensure power is restored as quickly and safely as possible.

GPA will continue providing daily updates as restoration efforts progress. GPA thanks our customers for their patience and asks for their continued support as we work to bring our IWPS back to normal operations as quickly as possible.
